---

mirai_init   *Initialize mirai for parade*

Description

One-step initialization of mirai for use with parade workflows. Sets up daemons and configures the future plan.

Usage

```
mirai_init(n = NULL, dispatcher = TRUE)
```

Arguments

n   Number of local daemons (defaults to number of cores)

dispatcher   Use dispatcher for load balancing

Value

Invisibly returns the previous future plan

Examples

```
if (requireNamespace("mirai", quietly = TRUE) &&
    requireNamespace("future.mirai", quietly = TRUE)) {
  # Initialize with default settings
  mirai_init()

  # Initialize with 4 daemons
  mirai_init(n = 4)

  # Clean up
  mirai_stop()
}
```
